

# Rubber Turns Calculator

100% max turns

80% safe turns

**How to use this chart:** Select a loop length for the rubber motor, then follow the line vertically until it intersects with the number of strands & width of the rubber you're using. Follow that point left & right horizontally to find the 100% max & 80% safe turns for that motor.

Be sure to lubricate your motor with a silicon lube, and wind in slowly to achieve these numbers.
